25. (New) An electronic book apparatus comprising:  
a display;  
display control means for causing the display to display  
images of a plurality of different characters appearing in  
respective relevant parts of a text of a book, and images of a  
plurality of different readers corresponding to voices for  
reading out the relevant parts of the book text;  
user-operable allocation means for utilizing the displayed  
images of the plurality of characters and the displayed images of  
the plurality of readers to select a reader to correspond to each  
character of the plurality of characters;  
display control means for causing the display to display the  
images of the plurality of characters and the book text, after  
the selection of the reader for each of the plurality of  
characters; and  
read means for reading out the relevant parts of the book  
text corresponding to the plurality of characters displayed with  
the book text such that a part corresponding to said each  
character of the plurality of characters is read out in the voice  
of the reader selected to correspond to the character.

26. (New) The electronic book apparatus of claim 25,  
wherein the display displays the book text such that a currently-
